To whom it may concern,

I am currently a Master's student at Rensselaer Polytechnic Institute. My career objectives focus on creating novel research into NLP and artificial intelligence alignment strategies. I have research, professional, and academic experience with machine learning strategies and a variety of architectures. My thesis is on a novel strategy for the alignment for large language models. My other research projects also fall into this area. This includes my research at both IBM and RPI itself. I have published several papers involving machine learning, moral alignment, and other related areas. I plan to work to continue my research or work on ML systems after my graduation in May 2024.

I am looking for machine learning engineering jobs specifically, so this seems like a very good opportunity. I have worked with language models, prompt engineering, and fine-tuning in both my work and research. I hope to be able to demonstrate and improve upon my skills further in this position as well.

Please feel free to contact me at any point if you have any questions.

Sincerely,

Matthew Pisano
